计算机控制的测试系统

Computer-controlled test systems ...

始于开始的质量保证

高效率的生产方式和计算机控制的测试系统是实现节约化生产的重要环节。

电路板采用在线设备进行测试，适配器会对电路板进行在线扫描并将扫描的结果与默认值进行对比，在几秒钟内就能得出任何的故障信息，例如插接错误，原件故障，短路或电气数值变化等等。

现代化计算机控制的检测设备实现了电源测试的最优化，任何的故障信息都会以条形码的方式记录下来。

... for assured quality from the beginning

Efficient production methods and computer-controlled test systems are part of cost-effective manufacturing.

The populated PCB's are checked using in-circuit testers. Adapters scan the PCB's, compare the result with default values, and detect within seconds any incorrect insertions, failures, short circuits or variations of electrical values.

Modern computer controlled test equipment enables optimized testing of power supplies. Any errors are recorded on a barcode in an error protocol.

综合管理系统

清晰的流程描述利于提高透明度和明确责任。因此，在综合管理系统（IMS）中，记录组织、架构和流程，这样能在所有领域（即：设计、开发、生产、装配、销售和客户服务）中保持质量一致（ISO 9001: 2008、ISO 14001: 2005、ISO 50001、SSCP、KTA 1401）。

这是企业理念的明确标志，注重质量和有效利用我们的自然资源。

Integrated Management System

Clear process descriptions support transparency and clarify responsibilities. For this reason, the organisation, structure and processes are documented in an IMS (Integrated Management System). This means consistent quality in all areas, i.e. design, development, production, assembly, sales and client service (ISO 9001:2008, ISO 14001:2005, ISO 50001, SSCP, KTA 1401). This is a clear sign of a corporate philosophy that focuses on quality and the efficient use of our natural resources.

Safety through experience – economy through innovation

Tailor-made suits fit perfectly! The same applies to the development of reliable power supply systems. Tailor-made solutions are developed closely in line with the client's needs and thus achieve added value.

A holistic overview at the beginning of the project guarantees that the new system will perfectly match the client's needs. For example, systems in power facilities must meet the highest safety requirements while at the same time being cost-effective and, where appropriate, flexible and expandable. Across the world, only a handful of companies have the know-how required to develop and manufacture these systems.

Bespoke battery-backed DC and AC power supplies, used in the energy, railway and industrial sectors, are produced in the large scale equipment production facility.
